

Trade Management Portal

Agility, Visibility and Control Over Orders
Jesta's Trade Management Portal (TMP) is a global procurement platform that streamlines and optimizes the processing and tracking of overseas orders and shipments.

The cloud-based portal provides centralized access to all supply chain parties worldwide for real-time order information, workflow statuses and shipment tracking. It provides complete order visibility so that all parties can track order progress at various stages as it moves closer to shore. A dedicated comments and questions section that is updated chronologically facilitates communication and collaboration between vendors, buyers, agents, logistics companies and other parties. TMP also enables easy document exchange and the printing of all required shipping documents by anyone at anytime. Moreover, information is synced seamlessly with Jesta's flagship Vision Sourcing & Demand and Vision Merchandising platforms, eliminating the need for any manual entry, which can be both time consuming and error prone.

Automated Integration

The automatic syncing of orders prevents mistakes from manual input.

Role-Based Views

Information and tasks displayed are different for head office employees versus suppliers.

Communal Learning

Global parties can view and add comments, which are posted chronologically.

Complete Independence

Collaborators worldwide can react proactively without waiting for instructions.

Location Tracking

The location of current orders (on a boat, land, at the border) is visible and precise.

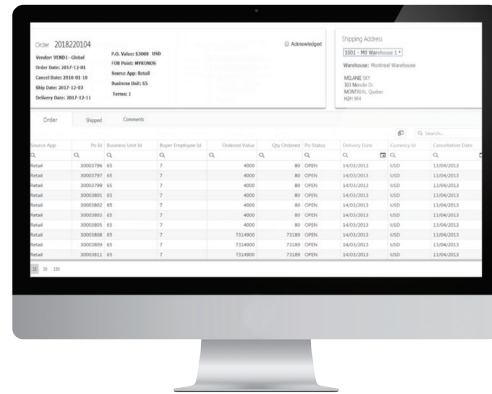

Paper Productivity

Shipping documents are generated by the system and can be printed by anyone, anytime.

How does it work?

1. ORDER CREATION

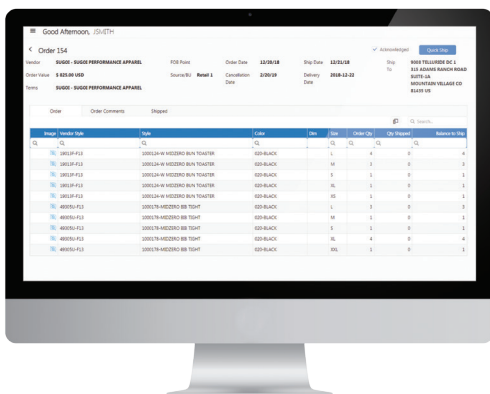

An order is created in Vision Sourcing and Demand or Vision Merchandising. Once it is approved, it automatically becomes available in the Trade Management Portal, with details such as order quantity and status continuously being synced.

2. SHIP

Once in the Trade Management Portal, vendors can view the new order, confirm the quantities shipped and enter tracking information. TMP features role-based views for head office employees versus suppliers so the information and tasks displayed are always specific to each collaborator. This way, when buyers login, they will be immediately notified of the order shipment and have access to tracking information.

All parties involved in the procurement cycle can view the order, attach documents, and add comments, ensuring that everyone is always up to date with an order's status and latest developments.

3. CONSULT

At any time, a dashboard features notification notifications for tasks, alerts, comments, and new, late, ready-to-ship and cancelled orders. By double clicking on specific orders, the user can drill down to see details such as quantity shipped by size and color, balance remaining to ship, vendor style number, and product image. A comments section is also available in this view.

ABOUT JESTA I.S.

Jesta I.S. is an international supplier of integrated software solutions for brand manufacturers, wholesalers and retailers specializing in apparel, footwear and hard goods verticals. Jesta's Vision Suite is a modular software platform that helps simplify the omnichannel journey for retailers and wholesalers – from PLM to POS. With 50 years in the business, Jesta I.S. has the experience and resources to help with the technology aspect, the human factor and everything in between.
